FREE SKILL · HOW-TO GUIDE

10 *Claude* Animation Styles

One Claude skill that turns any script into an animated video in ten looks: Pixel Art, Chalkboard, Glow Sketch, PS2, Comic Art, Flat Vector, Dan Koe style, CGI Motion, Lego style and ZackD Films style. Everything is drawn in code, so there are no stock clips and no image credits.

1 What's in the download

```
animation-styles/            ← the skill folder
├── SKILL.md                 how Claude picks a style and works
├── references/
│   ├── workflow.md          script → beats → frames
│   ├── checklist.md         quality check before export
│   ├── player-template.html player + Export video button
│   └── styles/              10 style guides, one per look
└── scripts/
    └── render.mjs           frame-exact MP4 (optional)
```

2 Install it

On claude.ai

web · desktop app

1. Go to **Settings › Capabilities** and turn on **Code execution and file creation** (in the newer layout it's called **Create and edit files**).
2. Zip the **animation-styles** folder by itself. Windows: right-click it › **Send to › Compressed (zipped) folder**. Mac: right-click › **Compress**.
3. Go to **Customize › Skills**, click **+**, then **+ Create skill** › **Upload a skill**, and pick that zip.
4. Make sure **animation-styles** is toggled on in your Skills list.

Keep the folder name `animation-styles` : claude.ai wants it to match the skill's name. Team and Enterprise plans may need an admin to allow skills first.

In Claude Code

terminal · desktop

1. Copy the **animation-styles** folder into your personal skills folder: `~/.claude/skills/` (Windows: `C:\Users\<you>\.claude\skills\`).
2. That's it. Claude Code picks it up without a restart (if you just created the skills folder, run `/reload-skills`). Type `/animation-styles` or just name a style.

3 Make your first animation

Open a new chat and send one message: the style, then your script (or a one-line idea). Format, length and captions are optional.

```
Use the animation-styles skill. Style: /comicart
Script: A paper plane takes off from a rooftop and flies through the whole city.
Optional: 9:16, about 15 seconds, captions on.
```

Watch and export

1. Claude builds one HTML file. Open it and press **Play** or scrub.
2. Press **Export video**: it records the animation in your browser (MP4 in Chrome, otherwise WebM).
3. Nothing downloads inside a preview? Save the HTML file and open it in Chrome.

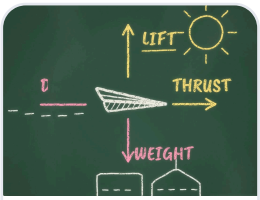

Frame-exact MP4 optional

1. Where Node 18+, ffmpeg and puppeteer (or playwright) are installed, Claude can run `node scripts/render.mjs file.html`.
2. It renders every frame, adds your voiceover with `--audio voice.mp3`, and checks the MP4.

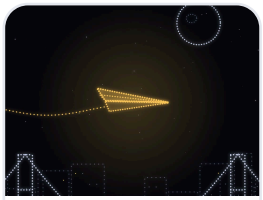

4 The 10 styles

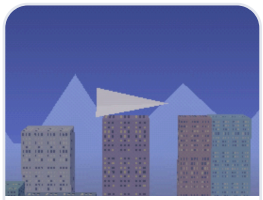

Pixel Art
`/pixelart`
Real 16-bit pixels, game feel.

Chalkboard
`/chalkboard`
Draws itself. Great for explainers.

Glow Sketch
`/glowsketch`
Gold dots of light on black.

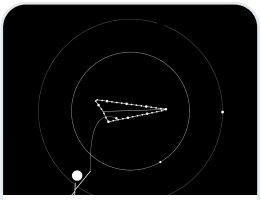

PS2 Style
`/ps2`
Low-poly 2003 cutscene.

Comic Art
`/comicart`
Ink, halftone dots, sound words.

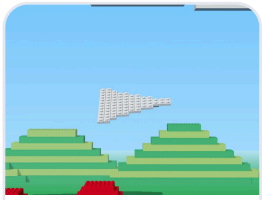

Flat Vector
`/flatvector`
Clean editorial shapes.

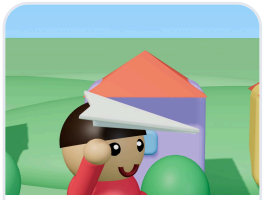

Dan Koe style
`/dankoe`
White lines and dots, big ideas.

CGI Motion
`/cgimotion`
Cinematic 3D light.

Lego style
`/lego`
Everything built from bricks.

ZackD Films style
`/zackd`
Soft clay 3D explainer.

5 Tips for better results

1. **One idea per sentence.** Every sentence becomes a beat, so short lines give cleaner shots.
2. **Say what should happen**, not only what it is: "the rocket wobbles, then blasts off" beats "a rocket".
3. **Got a voiceover?** Attach it. Claude times the animation to its real length.
